On November 24th, 2017, Electronic Arts released FIFA 18 to Xbox One, PS4, and PC. The game was universally praised for its innovation, gameplay, and various improvements over the previous entry in the long-running franchise. FIFA 17 was developed by a different set of teams, including both series veterans and fresh faces, to build upon what made FIFA 18 so successful. This year's release received "Great" reviews across the board, with Metacritic scores of 83/100 for PS4, 91/100 for Xbox One, and 84/100 for PC. After a brief return to the single-player story mode, FIFA 19 is now available, and EA SPORTS once again returns with FIFA for the new year. We've had a chance to sit down with Creative Director of Career Mode and Player Intelligence at EA SPORTS, Levent Nazar, who talked to us about the many changes that are introduced to the long-running series. Gameplay The addition of new ways to affect the ball in real time have been a main focus of FIFA 19. In this game, these effects are used in all three of the main game

modes: Player Create, Skills, and Manager. All of these systems are part of FIFA's Player Intelligence, a key innovation of the game from FIFA 17. Player Create The Player Create mode, which can be accessed directly from the main menu, has two main options to choose from: Your Player and Your Manager. The Your Player option allows you to create a player from scratch with all of the attributes available in the game. The Your Manager option allows you to create a manager who has specific attributes assigned to him or her to build upon when managing players. Creating a manager lets you manage a team for a single match, while creating a player lets you manage a team for a longer span of time. The You Player option has a very simple interface: a camera to control your player's running, skill, and vision. The Your Manager option has a much more extensive and advanced camera system that manages a variety of different settings to let you choose everything from how your players walk to which character their animations will be based on. The camera for both options is one of the

major additions to the gameplay mechanics of the game. In FIFA 18, this camera was found only when you went to one of the menus, but in FIFA 19, it's in every option at all times.
